The story

At Kast, we create exceptional design pieces that blend innovation, expert craftsmanship, and personal expression. Our mission is to elevate everyday living with statement products that ignite emotion, spark conversation, and bring character to any space.

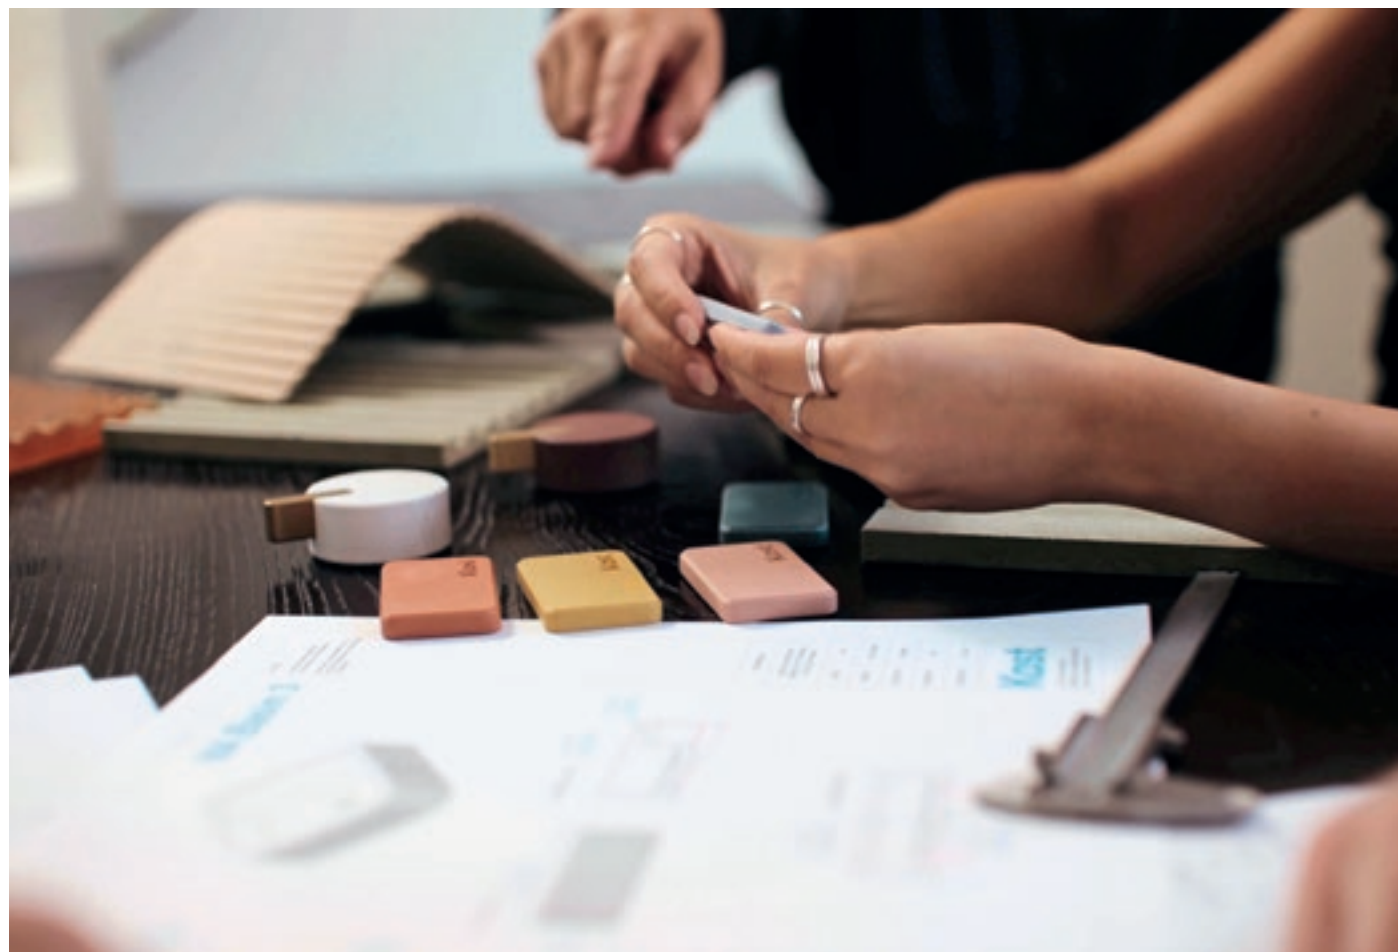

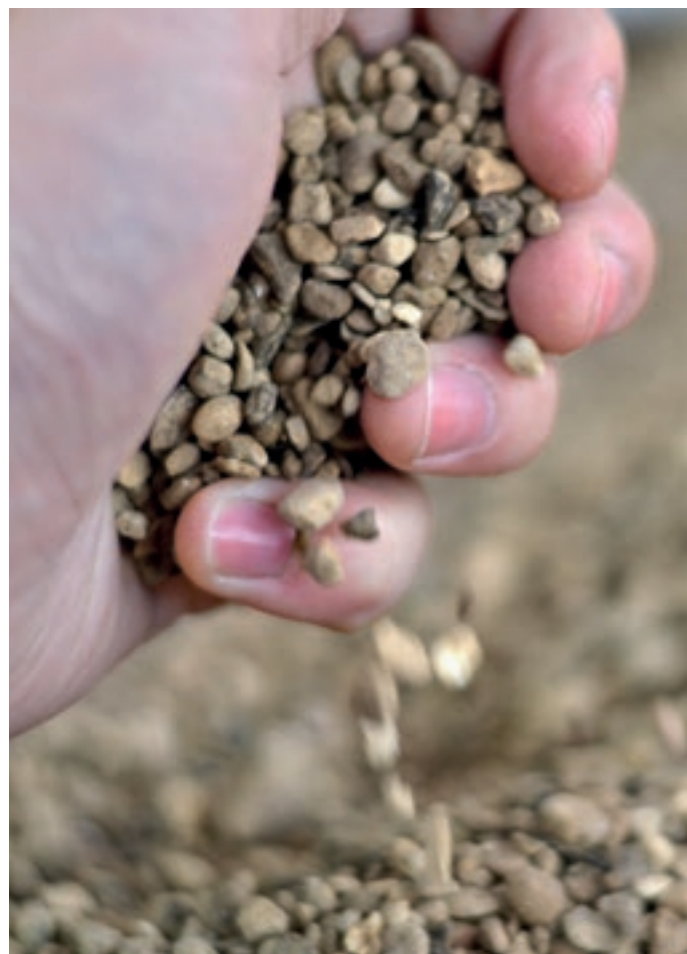

Each product is more than just a functional fixture, it's a true expression of personal style.

Situated on the edge of Sherwood Forest, our journey with concrete began over 20 years ago, driven by a passion for design and the untapped potential of liquid stone. At the time, concrete was an underused material, but we saw an opportunity to transform it into something culturally relevant and aesthetically beautiful.

As masters of our craft, we are driven by innovation, authenticity and the pursuit of excellence. The magic lies in our deep understanding of the material and a desire to reimagine materials in bold, meaningful ways. Liquid stone offers unparalleled pliability, allowing us to craft sculptural designs that balance artistry and functionality.

Our design-based factory is where creativity and craftsmanship seamlessly connect, where we continue to experiment, evolve, and explore new materials to complement concrete. Over time, we've refined our process, expanding into a unique range of colours, forms and textures. With a diverse palette of 28 colours ranging from subtle tones to vibrant hues, we empower individuals to express their unique personalities through design.

At Kast, we see every product as an opportunity to tell a story and every design as a canvas for self-expression. As we continue to evolve, our dedication to exceptional design and craftsmanship remains at the heart of everything we do. We're excited for the endless possibilities ahead, driven by a team dedicated to pushing the boundaries of creativity and excellence. ■

Why choose Kast?

Craftsmanship is at the heart of Kast. Our team of expert designers and makers bring years of specialised knowledge to every step of the process. From meticulous mould-making to precision engineering, our collective expertise ensures each product reflects the highest standards of quality and design.

Kast's journey with concrete is one of constant evolution, creativity, and craftsmanship. With over two decades of experience, we are driven by a relentless commitment to detail and excellence.

Attention to detail makes the difference

We believe that true craftsmanship lies in the details. Every step of our process, from mould creation to packaging, is executed with precision and care. It's these small, thoughtful touches that elevate our products, ensuring each piece is not only beautiful but crafted to the highest quality. The result is a product that stands apart, a testament to our unwavering commitment to excellence.

The magic of liquid stone

Concrete, or 'liquid stone', is more than just a material; it's a bold statement. Starting as a liquid and transforming into a solid, this unique material allows for unparalleled pliability, resulting in a tactile, distinctive look and feel that offers a contemporary edge and a connection to natural materials. Our mastery of the material comes from years of refining and perfecting its properties, allowing us to craft distinctive products rich in character.

Different by design

Our specialist factory, located on the edge of Sherwood Forest, is also home to our design studio, creating a unique space where creativity and craftsmanship converge.

This connection between design and making is essential to our story. Having full control and flexibility when it comes to designing and making allows us to continually improve and innovate. Each product we create is designed to stand out and make a statement. We push the boundaries of what's possible, creating designs that are as bold and distinctive as the people who choose them.

Low energy process

Our production process offers a low-energy alternative to traditional ceramic basins. Unlike the energy-intensive high-temperature kilns required for ceramic curing, our concrete basins take shape and solidify at room temperature through a natural chemical curing process. Additionally, we pride ourselves on crafting each basin to order and reducing overproduction and excess inventory, often leading to wasteful outcomes in conventional manufacturing. Our commitment to local material sourcing, waste reduction, and conscientious water usage further underscores our dedication to sustainability.

Market Leaders

Kast was the first brand to introduce a dedicated collection of concrete wash basins, setting the standard for luxury concrete basins. Over the years, we've expanded our range to include a diverse array of designs, each showcasing the unique character of the material. Through constant refinement and a deepening understanding of the material, we've unlocked new possibilities, allowing us to create truly unique products that elevate everyday living.

We continue to lead the way in concrete design, pushing the boundaries of form, colour, and material. This is why Kast has become the choice of homeowners, designers, and architects around the world. ■

The material

Concrete is a unique, timeless material. Starting life as a liquid, it transforms into a solid, unlike any other stone. Its versatility allows us to craft products that push the boundaries of design, enabling limitless design possibilities.

Our unique product range is a testament to what can be achieved with this liquid stone. From simple monolithic forms to refined contours and patterned textures, our ever-growing product range sets a precedent for what's possible with this material.

Concrete is inherently unpredictable, but that's part of its charm. Over the past two decades, we've mastered it through practical, applied research to produce some of the most aesthetically refined mixes in the world. Our extensive knowledge and experience allow us to push the material to its limits, designing out its inherent challenges to create extraordinary products.

Our bespoke blend enhances strength, durability, and colour, creating vibrant, tactile designs with organic, stone-like qualities. Our expertise in colour allows us to offer a diverse and richly curated palette. Whether subtle and earthy or bold and vivid, each hue is carefully developed to complement the natural textures of concrete while maintaining its distinctive character.

Rich in both colour and character, our material creates an inimitable quality that brings vibrancy and life to every product. ■

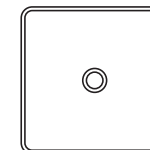

K

Arla.

Options

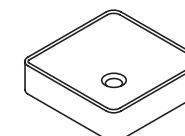

- Available in multiple sizes
- Surface mounting
- Compatible with all standard unslotted wastes
- Taps, trap + waste not included

Plan view

Kast colours

Weight

All Kast basins are crafted from high-quality concrete resulting in a substantial weight. It is the client's responsibility to ensure the brackets are securely installed to a structural wall, with wall reinforcement where necessary, to properly support the basins. Estimated basin weights can be provided upon request. Proper preparation and installation are essential to ensure the long-term stability of the basins.

Brackets

All wall hung basins will be supplied with steel wall mounting brackets. To ensure that the basin weight is fully supported, brackets must be recessed into the wall by 10–30mm and fixed to an appropriate wall substrate such as timber or metal studding. All brackets for bespoke work will be judged accordingly by a member of the design team. Overall sizes will then be detailed on the manufactured drawings and require sign off by the client before going into production. Since applications and site conditions vary, the installer is responsible for ensuring proper installation of the basin.

Frames

As an alternative option to wall mounting your basin, Kast can also supply you with a steel frame, powder coated to any RAL colour, customised to the size of your sink. Frame costs are calculated based on the overall size and specification. If you would like to explore the options available please contact a member of the Kast team.

Overflows

As standard all Kast basins are not designed to include an overflow. If this is a project requirement please contact a member of the Kast team to discuss your custom requirements and the options available.

Tap-holes

All Kast basins that are designed to include tap holes can be supplied with the tap holes pre-drilled unless stated otherwise. Tap holes cannot be drilled until hole size and location has been confirmed by the client. Tap holes must be confirmed at time of order or lead time may be affected. Alternatively sinks can be supplied without the holes drilled and these can be drilled on site. Please contact a member of the Kast team who can advise how best to do so.

Care & Maintenance

Kast basins are made from a specialist concrete mix developed to increase strength, durability and stain resistance. Our sealing system provides the most effective protection whilst maintaining the natural look and feel of the concrete. Concrete however, like any stone, can stain and chip if not treated with care. Much like a natural stone or timber, concrete will also naturally patina over time and will evolve depending on the usage and surroundings.

To help maintain your Kast Concrete Basin, we provide the following guidelines:

When cleaning your basin, Kast advises using a soft cloth and a PH neutral cleaner with warm water. Kast basins must NOT be cleaned with any products containing bleach or harsh chemicals. Basins should be rinsed thoroughly and dried after cleaning.

Avoid leaving any liquids on the surface, especially liquids containing acids or alkali as these may cause erosion to the surface of the concrete. If liquids containing these properties do come into contact with the surface we recommend these are wiped away as soon as possible.

Kast basins must NOT be rubbed with abrasive materials such as scouring pads, abrasive sponge-backs or wire wool as this may result in scratching and permanent damage to the surface.

Avoid leaving any items on the surface that may allow a vacuum to form underneath e.g. a cup or bottle etc. Leaving items on the surface for a period of time can cause a difference in surface texture.

As an additional protective barrier Kast basins can be waxed regularly with a soft cloth as and when required.

Avoid impact from heavy objects directly onto the concrete surface. Although concrete is a very durable material the edges are most vulnerable and impact can cause chipping, cracking and in some situations, breakages.

Following these guidelines will limit the effects of everyday use and keep your concrete in the best condition. Staining, scratching and chipping can however occur; Please see terms and conditions.

For further information or advice please refer to our Advisory Document or contact info@kastconcretebasins.com

Warranty

All Kast products have a warranty of 2 years against structural failings only. It is advised that all Kast basins are fully inspected within 12 hours of delivery and any issues are reported to a member of the Kast team immediately. If there is damage to your concrete basin, Kast will recommend the best solution. Due to the semi-bespoke nature of the products, Kast does not offer refunds. For more information please refer to our Terms & Conditions.

Product care

Kast custom basins can be produced to specific requirements to suit any bathroom or utility space for both residential and commercial markets. Specially designed and handcrafted in our factory, each bespoke basin mould is uniquely produced, cast and finished in your chosen colour.

The Kast design team can work with you to realise your concepts through detailed drawings and sampling. Please visit our website or contact us directly for any bespoke commissions.
